

Sivanishanth J

Full Stack Developer · MERN Stack

+91 88254 33842 | sivanishanth303@gmail.com | github.com/Sivanishanth | linkedin.com/in/sivanishanth303 | Madurai, Tamil Nadu, India

SUMMARY

Full Stack Developer with practical experience building and deploying MERN stack applications. Developed production-ready REST APIs with JWT authentication, bcrypt security, and MongoDB Atlas — including a live deployed full-stack blog platform. Comfortable owning features end-to-end across backend API design, database modelling, and React frontend integration.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, React Router v6, useState, useEffect, useContext, Axios, Conditional Rendering, Form Handling

Backend: Node.js, Express.js, REST API Design, MVC Architecture, Middleware, CORS, express.json(), Error Handling

Database: MongoDB, Mongoose, MongoDB Atlas, Schema Design, CRUD Operations, Population, Connection Management

Authentication & Security: JWT (sign, verify, expiry), bcryptjs (hash, compare), Protected Route Middleware, dotenv, Environment Variables

Tools & Deployment: Git, GitHub, Postman, Render.com, Vercel, npm, nodemon

PROJECTS

Blog API — Full-Stack Web Application

React.js · Node.js · Express.js · MongoDB · Mongoose · JWT · bcryptjs · Axios · Render.com

GitHub: github.com/Sivanishanth/blog-api | Live: blog-api-flrk.onrender.com | Portfolio: github.com/Sivanishanth/MyPortfolio

- Built a full-stack blog platform where users can register, log in, and perform complete CRUD operations on posts — backend built with Express.js following MVC architecture with clearly separated routes, controllers, and Mongoose models.
- Implemented JWT-based authentication with bcryptjs password hashing, token expiry handling, and middleware-protected routes to restrict access to authenticated users only.
- Validated all incoming requests with field presence checks, email regex, and password length rules; returned structured error responses with appropriate HTTP status codes (200, 201, 400, 401, 500).
- Deployed the Express backend to Render.com with production environment variables configured; connected to MongoDB Atlas with IP whitelisting and integrated the React frontend using Axios with CORS handling.

Student Management REST API

Node.js · Express.js · MongoDB · Mongoose · MVC Architecture · dotenv

GitHub: github.com/Sivanishanth/student-api

- Developed a RESTful backend API for student record management with full CRUD endpoints — Create, Read, Update, Delete — using Express.js routing and Mongoose for database interaction.
- Structured the codebase using MVC architecture, separating route definitions, business logic in controllers, and Mongoose schema models for clean maintainability and scalability.
- Handled all database operations asynchronously using async/await with try/catch error handling; managed configuration through dotenv for environment-specific settings.

EDUCATION

Master of Computer Applications (MCA)

Madurai Kamaraj University College, Madurai, Tamil Nadu | Expected: 2026

B.Sc. Computer Science

SRM Institute of Science and Technology | 2023 | CGPA: 7.36
